

BRAINROT CASINO

SPIN • MAYBE DING • DRAW • CHECK • HIT • RESET

One physical 54-card deck + one phone slot machine

7♣

K♥

A♠

JOKER

1. SETUP

Choose N slots. Every player is dealt N physical cards to start. Shuffle the remaining physical deck.

Recommended slot counts: 3 easy, 4 normal, 5 hard.

2. SPIN

Press the SPIN button whenever the group wants another roll. The reels animate for about 3 seconds, then stop on N random cards.

Each spin independently has a 5% chance to DING.

3. THE DING

If the spin dings, every player draws exactly one card from the physical deck before checking the result.

No ding = no draw. The slots still finish their spin normally.

4. HIT

You HIT only if your physical hand contains every card shown in the slots.

A Joker shown in a slot MUST also be in your hand. There are two physical Jokers in the 54-card deck.

If the same normal card appears more than once in the slots, one physical copy is enough.

5. SCORING

2-9	5 pts
10 / J / Q / K	10 pts
Ace	15 pts
Joker	x2

Add non-Joker slot values, then apply each Joker multiplier.
Example: A + K + Joker = (15 + 10) x 2 = 50.

6. AFTER ANY HIT

Award the hit points to the player who matched the slot.

Then EVERY player resets their hand back to exactly N cards.

Return all physical cards, reshuffle the full 54-card deck, and deal N fresh cards to every player. Then resume spinning.

THE LOOP

PRESS SPIN → 3 SEC ANIMATION → 5% DING? DRAW 1 → CHECK → HIT? SCORE + RESET
